

QLF Optimiser CF

Supplementing with QLF Optimiser CF has been shown to:

Key benefits:

- ▶ Help reduce somatic cell counts
- ▶ Enhance milk yield

Observed farm evaluation benefits:

- ▶ Optimise foot health
- ▶ Positively impact fertility

What is QLF Optimiser CF?

A unique QLF Vitamin and Mineral pack that includes Availa® Zn suspended in a liquid molasses based product.

How can this help?

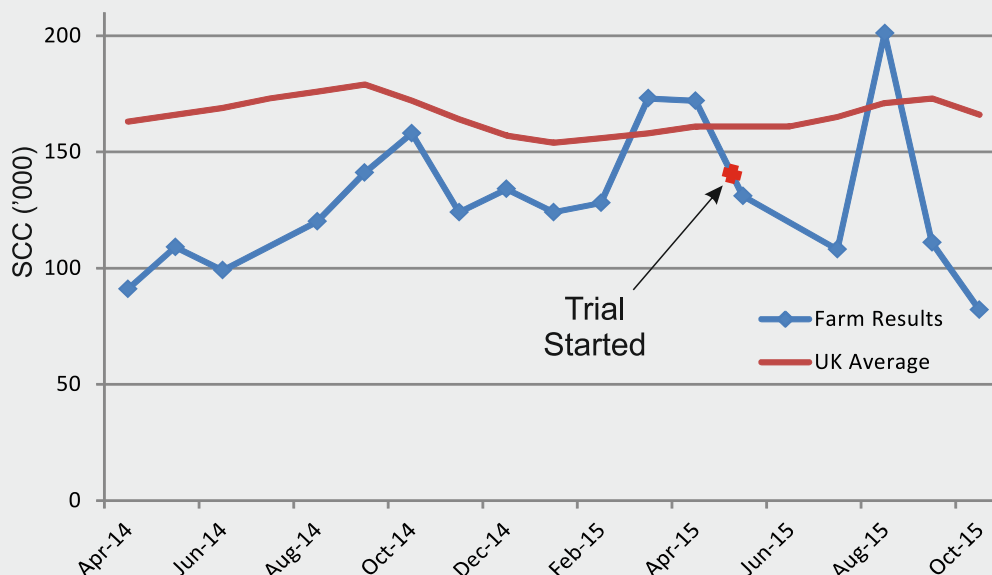

- ▶ Even dispersion of the vitamins & minerals
- ▶ Accurate dosing to the dairy cow

Why use Optimiser CF?

- ▶ Help optimise milk output
- ▶ Improve udder health
- ▶ Boost immune status which may lead to reduced antibiotic use

The Evidence – Farm trial

In May a farm with a SCC of 131,000 per ml and a history of rising SCC during the summer (which follows the national trend) QLF Optimiser was introduced. After feeding QLF Optimiser CF for two months, the SCC had fallen to 108. In July, the herd was vaccinated for leptospirosis, which elicited a strong immune response despite which, after a few weeks, the SCC continued on a downward trend.

Farm Results

- ▶ Somatic Cell Count reduced by 40% in 5 months
- ▶ 17% increase in PD positive results
- ▶ Less "silent cows" in the herd which reduced the need for veterinary intervention
