

QLF Beef Liquid Supplements and their advantages...

Spurred by ongoing industry advances, increased use of supplementation programs, and the perennial need to maximise net returns while effectively using home produced forage, liquid feed use has seen dramatic growth in the beef sector.

Liquid supplements are now standard components of mixed rations fed to thousands of beef and dairy animals. Producers appreciate the advantages of improved palatability and diet uniformity, and reductions in ration sorting and dustiness. Liquid supplements are nutrient-dense, and serve as excellent carriers for additives.

Traditional liquid feeds, delivered in self-fed lick wheel feeders or directly in a TMR applied to harvested forages, offer their own set of nutritional, practical, and economic benefits to beef producers.

Quality Liquid Feeds, Inc. (QLF USA) has been a pioneer and leader in the liquid feed supplement area for over 30 years, offering their customers consistent, scientifically formulated feeds for a wide range of animals, diets, and environments.

Quality Liquid Feeds Ltd has been manufacturing on licence from QLF Inc since 1990, and our family firm offers the full range of QLF's products and technical knowledge to UK producers.

Advantages of QLF Liquid Supplements:

Increasing numbers of beef producers are opting to use liquid feed supplements. Their primary reasons for moving to liquids are as diverse as their operations but they all enjoy a wide range of benefits. The primary advantages that may be gained by using QLF for beef are as follows:

- Increased forage intake and utilisation
- Convenience
- Economics
- Palatability
- Less Feed Waste
- Reduced Supplement Shrink
- Less Ration Sorting
- Lower Labour Requirements
- Enhanced Soluble Nitrogen Utilisation
- More Available Phosphorus Source
- Good Vitamin Stability
- Lower Equipment Costs
- Ideal Carrier for Additives
- Improved Ration Uniformity
- Reduced Dust in the Ration
- Ease of Palm Oil Addition
